Holzhanterung Universal & unloading fork 1,2–4,4 m²

This fork is recommended for general loading and unloading work of round-wood from transporters and railway cars.

The fork's short lower tines allow unloading of vehicles to be carried out in stages with careful handling. This is especially useful where costly timber is to be unloaded.

The circular grip area permit it to be filled to its full capacity but the load can also easily be divided.

Standard equipped for quick-coupler.
